

Guides

Welcome to the **ONOS Guides!**

- [Contents](#)
- [Conventions used](#)
- [Contributing](#)

Contents

The ONOS Guides provide comprehensive information, and are divided into several categories. It is highly recommended that you work through the [Tutorials](#) before taking a look at the ONOS guides to get the most out of the information here.

- [Administrator Guide](#) - How to install, configure, and use ONOS and its applications, and its current use cases
- [Developer Guide](#) - How to develop on and/or contribute to ONOS, and the tools and procedures involved
- [Architecture and Internals Guide](#) - The design and implementation of ONOS, its major subsystems, and sample use cases
- [Javadocs](#) - The ONOS APIs of the latest stable release
- [FAQ](#)

Conventions used

There are a few conventions that we use throughout these docs.

- Unix shell commands begin with '\$' or for superuser, '#':

```
$ sudo -s
# id
uid=0(root) gid=0(root) groups=0(root)
```

- ONOS CLI commands begin with 'onos>':

```
onos> summary
```

- Both shell and CLI commands are inlined in sentences in monospace font, e.g. `ls` or `topology`.
- File names, directory paths, and keywords are in *italic*.
- User inputs and navigation of web pages are **bold** e.g. **Ctrl-D** and **Browse > Pages**.
- Italic and monospace terms may also be bolded to emphasize them.

Further conventions, if any, are described where relevant.

Contributing

We try our best to keep this wiki and documentation set up-to-date. Please refer to [Contributing to ONOS Documentation](#) if you're interested in helping out.
